Introducing The Lockwood Window Company

Established in 1997, The Lockwood Window Company is a long established family business specialising in the design, manufacture and installation of both a bespoke and standard range of PVCu windows, doors and conservatories, and composite doors and windows through sister company **Yorkshire Doors & Windows**.

The team at Lockwood prides itself on the professional and individual level of customer service provided to every customer, which is matched by the highest quality products available. This is reflected in our achievement of a position on the **MWCIA Top 100 Registered** company list.

We are also registered with **FENSA** - the industry standard for replacement windows and doors - so you have complete assurance of our standards. Plus all our products are available with an insurance backed guarantee.

We install into domestic, new build and commercial buildings, and can also offer a 'supply only' service to both members of the public and trade.

All products manufactured by The Lockwood Window Company are CE marked giving you assurance that they comply with all relevant EU legislation.

Composite Doors

What is a Composite Door?

The composite doors manufactured by us combine a solid timber core and thermo plastic door skins, with a Kommerling outer frame reinforced with galvanised steel and Astral S locking cylinder. Resulting in a door that is extremely strong and secure.

Although it appears to look just like a solid timber door, a composite door has greater benefits as, thanks to the materials used, it won't fade, discolour or require any maintenance beyond wiping with a damp cloth if it gets dirty.

Below is a comparison between a composite door made by us, and a typical foam filled door to give you an idea of the differences between the two.

Our Construction

Kommerling outer frame reinforced with galvanised steel

Thermally efficient solid hardwood timber core

Robust through colour thermo plastic skins

Realistic wood grain effect or smooth finish

A key point is that our composite doors feature the steel reinforced profile unlike many other companies who just use thermal inserts which are not as strong. Because we manufacture, supply and install to order we can also provide a bespoke service with the ability to create composite doors which incorporate top lights and side panels into the frame. This ensures that your new door is probably the most secure and aesthetically pleasing on the market.

We have a wide range of style, frame and colour options available for your new composite door - whether your preference is traditional, contemporary, French or stable - along with an extensive selection of glass options including a range of obscure glass.

A Typical Foam Filled Construction

Only a small section of the door is actually solid

Thermally good, but foam filled not solid, nor secure.

Gel coated GRP may be strong, but scratches very easily

Most other doors have frames containing lead stabilisers. The frames are only 3 chambers thick

Colour Palette

All composite doors are available in all colour options outlined below.

Glass Options

We have a wide choice of glass available to choose from for your new door, examples of which can be found throughout this brochure. To see all options available for your chosen door, visit our website and use our unique door designer tool.

Energy and Security

All glass fitted in our doors is energy efficient Pilkington KS Glass. This is a low emissivity coated glass which reflects heat back into the room whilst also letting in free heat from the sun, known as passive solar gain. Pilkington KS Glass helps glazed doors to achieve high energy ratings to comply with Building Regulations Part L.

Safe and Secure

With a property burgled every minute in the UK, security of your home is obviously a priority and having a quality front and back door for your home could make all the difference.

A composite door is better than a traditional PVCu or wood door for several reasons. Our 48mm thick solid timber core, pick-resistant multi-point locking systems - the Astral S - and reinforced door frames give you the strongest and most secure option available in a residential door.

The Most Energy Efficient Composite Door

Our range of composite doors are the greenest, most energy efficient and most sustainable composite doors available.

Here's why:

- All of the timber used in the doors are harvested from forests that are managed and are sustainable.
- Each door can be recycled at the end of its life.
- All doors are manufactured in the UK to reduce our carbon footprint.
- The profile of each door has 5 chambers and is completely lead free.
- All doors have lead free skins and edgbanding.

We only use the highest standard of cylinder in our locking systems that have been tested to the highest grade of BS EN 1303 for security, achieving the maximum resistance to physical attack.

THE ITALIA COLLECTION

The Italia Collection is a new generation of truly contemporary composite door designs that will add a touch of style to your home. Carefully designed and crafted from the finest materials, every composite door in our Italia Collection has a definite style inspired by the Italian passion for design.

THE ITALIA COLLECTION

All doors in our Italia collection can be made to bespoke requirements with a choice of glass and accessory options. Visit our website to see the full range of options available.

FLINT

The Flint range of composite doors was designed with country cottages and farmhouses in mind. It is also a popular option as a side or stable door. Vertical panel styling gives Flint composite doors a traditional look, which can be customised with diamond or rectangular glass features in a range of patterns.

SIDE PANELS AND TOP LIGHTS

Complement your new or replacement composite door with a fully integrated matching full or half height composite side panel, either solid or with glass. Available in any of our colours, inside or out.

We can also manufacture, supply and install top lights to match your chosen composite door design.

All side panels and top lights are fully welded and reinforced, feature the same 48mm thick solid timber core, durable plastic edge banding and 2 thermo plastic skins for security and strength. They are also fitted with energy-efficient Pilkington KS glass.

COMPOSITE FRENCH DOORS

Although previously only available in PVCu, you can now take advantage of all the fantastic benefits of a composite door in a French door style. What's more you can choose any of our existing composite doors designs to be made into French doors for your home, and with the same choice of beautiful colourways inside and out. All our doors are also available with either an outward or inward opening option.

STABLE DOORS

A composite stable door can add a whole new dimension to your kitchen or back door, with all the benefits of a PVCu door and none of the ongoing maintenance issues of a timber stable door.

Our stable doors can be opened either inwards or outwards, and are available in any of our colours, inside or out, and the majority of our styles (excluding some Italia designs - ask for details).

We can also manufacture composite stable doors to any size like this one (pictured right) which is just 1740mm x 940mm!

As standard, all our stable doors come with a high security, fully adjustable multi point locking system. They are also keyed alike and benefit from an internal thumb turn cylinder on the bottom half (optional). They also have a latching security bolt as standard.

We also have an extensive range of traditional and contemporary ironmongery to add the finishing touch to your new stable door, including door knockers, door handles and letter plates. (See accessories page).

SHAPED COMPOSITE DOORS

Under normal circumstances if you had a shaped door entrance you would not be able to have a composite door, as it has not been possible to shape the door slab due to the nature of the material.

However, because we have extensive knowledge of the industry, we have invested in research and development in order to be able to overcome this difficulty and provide you with a truly bespoke service that allows you to have a composite door - whatever shape you require. Available either opening inwards or outwards.

Bespoke Roma composite door in White with integrated side panels.

Shaped Harlech composite door in Rosewood with Prairie glass

Bespoke shaped composite door in Black with White frame

Arched Beeston composite door in White with clear glass and integrated side panels.

Shaped Flint 2 composite door in Rosewood

BI-FOLD DOORS

Bi-fold doors are the ideal solution to let in light and bring the outside in, either extending your living room into your garden or bedroom to balcony.

PVCu

Our PVCu bi-fold doors use the new and improved Kommerling frame, which can be made to match doors and windows, and provides a unique combination of either a classic or modern appearance with state-of-the-art performance. They are also 5 chambered for better thermal efficiency.

Aluminium

Alternatively you could choose the more slimline aluminium option for your bi-fold doors, which can be manufactured to replace entire walls to expand your living space, and have narrow sight lines to allow maximum light to flood into a room.

Pilkington KS Glass is also fitted as standard to all our bi-fold doors which helps to achieve high energy ratings as it is a low emissivity coated glass that reflects heat back into the room whilst also letting in free heat from the sun.

PVCu WINDOWS, DOORS & CONSERVATORIES

Whether you are looking for double-glazing, PVCu windows and doors or conservatories, Lockwood Windows can fulfil all your requirements.

All our products are available in a choice of foil-laminated colours, which are durable, hard-wearing and weather resistant. (Dual and additional colours are available on request.)

PVCu WINDOWS

We are able to manufacture an extensive range of window styles including patio (with tilt and slide option), casement, sash (with sash horns), and tilt and turn with concealed locking mechanisms.

Our coloured window frames are also available with coloured interior trims to complement the frames, and are also manufactured with internal beading as standard.

Roofline fascias, soffit boards and cladding is also available to match windows.

Please visit our website for more details.

PVCu DOORS

In addition to our extensive range of windows, we also manufacture a wide selection of door styles including residential front doors, patio doors, French doors, bi-fold doors (see p24), and stable doors, which are all fully reinforced with galvanised steel.

All normal residential doors are fitted with high security, state of the art locking mechanisms and handles as standard, including shoot bolts and hooks to top and bottom, dead bolts with latch and four rollers for compression.

Security cylinders are fitted to all doors as standard and have been since November 2005.

PVCu FRENCH DOORS

Our PVCu French doors are available in a choice of colours, both inside and out, and are the perfect addition to your home - helping to bring the outside in, with unrestricted access to your garden, patio or conservatory.

Energy efficient, high quality and secure, our French doors are internally beaded and have a multi-point locking system as standard.

Whether you choose to have your new doors opening inwards or outwards, they will come with a standard set of handles, or you can select an alternative from our accessory range (additional cost may apply).

PVCu CONSERVATORIES

We have vast experience in designing and installing conservatories of all types, both traditional and contemporary.

Glass and polycarbonate are the two types of conservatory roof materials available, both having different colours and various heat guarding foils to help to regulate the temperature, and reduce the solar glare inside the conservatory.

Each conservatory is designed to your specification, so whatever style and finish you choose we will use our experience and knowledge to bring you the best solution at a realistic price.

We also employ our own builders, electricians and plumbers to make your new project as hassle free as possible.

White Conservatory with sunburst design and polycarbonate roof

White PVC Conservatory with self cleaning roof

KOMMERLING

We manufacture using the Kommerling 070 Gold or C70 PVCu systems as we believe they are the best products available on the market.

070 Gold:

- 5-chambered with revolutionary ovolo or rounded profile providing a unique combination of classic appearance and state-of-the-art performance.
- Curved slimline frame and opening sash create a 'softer' appearance whilst offering unrivalled benefits.
- Steel reinforced profiles.
- High security multi-point locking and shoot bolts.
- Extruded using a lead-free PVCu Greenline compound.
- Fitted with Pilkington KS glass.
- Meet or exceed Level C on Energy Rating Certificate in accordance with latest Building Regulations.

C70:

- Has the same properties as 070 Gold but gives a more modern look and feel with clean lines without compromising thermal efficiency or security.

070 Gold

C70

KÖMMERLING®

PILKINGTON KS GLASS

Since 2002 all new and replacement glazed doors or windows have to use Pilkington KS Glass or similar low 'e' glass. This is a low emissivity coated glass which reflects heat back into the room whilst also letting in free heat from the sun, known as passive solar gain. Pilkington KS Glass helps windows and doors to achieve high energy ratings to comply with Building Regulations Part L.

PILKINGTON ENERGIKARE

Also available is Pilkington energiKare. This is an energy efficient double glazing unit from Pilkington. When installed in good window frames it helps to achieve the requirements of the Energy Saving Trust, which has resulted in the glass receiving Energy Saving Recommended status as an energy efficient product.

All windows and doors are fitted with high quality handles, and high security, state of the art locking mechanisms.

Upgrades are offered on ironmongery to complement each customers individual taste.
See p34 - 39 for details.

PILKINGTON TEXTURE GLASS WARWICK

This design is unique amongst our patterns because it is produced using a different manufacturing method. Pilkington Texture Glass Warwick is a random pattern that is added along the central portion of the pane and this has implications when cutting the glass down into finished sizes.

It is possible, if a pane is cut small enough, it could be cut with no evidence of the pattern at all.

None of the Pilkington patterns are designed to have an orientation (an up side) but care needs to be taken with adjacent panes that the pattern direction is maintained.

There is a linear nature to Pilkington Texture Glass Warwick and so householders should be aware that there could be aesthetic implications when choosing this design. Also, for the glass supplier the result may be that this pattern is less accommodating of seldge from the original glass plate.

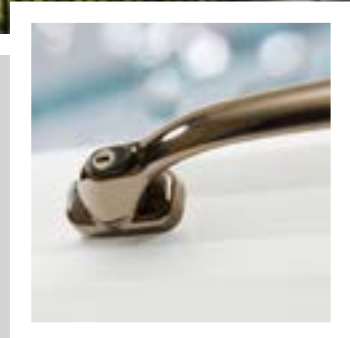

ENERGY AND SECURITY

Windows which are installed must be compliant with building regulations in regards to thermal loss, as all homes now need to be as energy efficient as possible.

The British Fenestration Rating Council (BFRC), in conjunction with the UK glazing industry and European partners, has designed a window rating system which provides simple and accurate information regarding the energy efficiency of a product.

All windows supplied and / or installed by Lockwood Windows are A-rated as standard.

The BFRC provides third party certification for the total thermal performance of windows, which are rated using the familiar A to G scale on the basis of their total energy efficiency, where A-rated is more energy efficient than G-rated.

This means that you can quickly choose the most suitable window for your needs, and government inspectors and agencies can quickly see if the window meets the legal requirements.

In order to achieve a C-rated window, or above, many companies are choosing to use a basic PVCu system, which achieves the required efficiency rating but is sadly lacking when it comes to security, with only a thermal plastic sleeve for reinforcement, or no reinforcement at all.

For this reason, we advise customers to think carefully before deciding which company to use for new or replacement windows, and would recommend that you ask some key questions before proceeding.

1 Is your supplier part of the BFRC authorised retailer scheme or a member of FENSA? This provides you of assurances of their professionalism and standards.

2 Does the supplier use the A-E energy-efficiency rating? This will help you make a more informed choice as to which windows you choose.

3 Do the frames of your new windows have integral metal reinforcement to maximise security? Window frames without this will not be as secure.

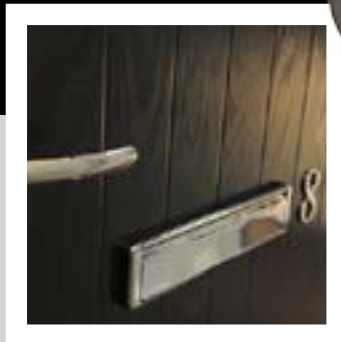

4 Is your supplier listed in the Master Window and Conservatory Installers Association's Top 100 list?

At Lockwood Windows we are not prepared to compromise on security or quality, and have invested heavily to provide the most energy efficient and secure window systems available on the market today.

ACCESSORIES

We offer an extensive selection of accessories and ironmongery to complement whichever composite door or PVCu door, windows or conservatory you choose. From knockers and handles to letter plates, we have both traditional and contemporary options for you to choose from.
